

# **BARON**<sup>®</sup>

*Custom Accessories*

***"World's Best Cruiser Parts"***

Originally built to show off Baron's carbon fiber "Bobber" body parts. The bike was featured in several national and international publications and was one of the featured bikes in Baron's current catalog.

The fenders, dash, side covers and dash extensions are carbon fiber, and the fuel tank has been stretched 3 inches. Also installed on the fuel tank is a carbon fiber canard-edged reveal, added to the top of the tank to give it added depth and flare. The paint and graphics were done by famed motorcycle painter Dan Hatch, and is truly artfully done. His use of dark and translucent blues to create graphics that allow the weave of the carbon fiber cloth buried beneath the translucent surface to seem to shimmer and dance under the lights. The bike has dozens of chrome accessories and custom details. Each was carefully selected by the Baron to accent the shape of the body, the graphics and to further enhance the attitude of the bike!

The engine is very strong and features a Baron-selected combination of products to kick up horsepower, torque and performance to impressive levels, but still maintain reliability and dependability.

### **Custom Features:**
